Sample Guide
E = EDTA
S = Serum
H = Heparin

An ideal sample volume is 1ml of separated serum or plasma.

This allows for assays to be repeated if necessary or further analysis to be added if required.

*A serum sample can also be submitted for Glucose if this has been separated within one hour of collection.

25 OH Vitamin D and 25 OH Vitamin D and 1.25 OH Vitamin D (Calcitriol)

1.5ml serum taken after an overnight fast, centrifuged within the first hour, freeze the sample until ready to dispatch - do not expose to excess sunlight.

PLEASE NOTE

Should you require to submit large volumes of samples please contact the lab to give notice
