

Thymidine Kinase

A useful marker to monitor treatment response in cats and dogs diagnosed with malignant lymphoma

- Thymidine Kinase is a cytosolic enzyme marker of cell proliferation
- Serum concentrations increase in cases of malignant lymphoma
- Serum concentration may be associated with prognosis
- Use to document chemotherapeutic success by comparison to pre-treatment values
- Monitor chemotherapy and identify relapse prior to clinical deterioration
- Differentiate between causes of clinical deterioration in a lymphoma patient receiving chemotherapy

0.3 mL Serum sample required
